White arrows in photos: LEFT clean Bilge Bag introduced to a dark, "oily mixture" in the bilge. RIGHT Within minutes the bag swells and turns the color of the oily mixture as it "encapsulates" ONLY the potential pollutant leaving a "treated bilge water" now ready for overboard discharge.

For Immediate Release:

For as little as **\$30/boat/year*** ... eliminate the chances of an accidental discharge of fuel, oil and oily mixtures.

A "visible sheen" is defined as a "silvery" or "metallic" sheen, gloss, or increased reflectivity; visual color; iridescence, or oil slick on the water surface. A common source of "visible sheen" is from engine oils, gasoline and diesel fuels, hydraulic fluids and other petroleum based products that find their way into the water. In most cases the cause is either accidental or from everyday activities involved in the use of internal combustion engines, petroleum based lubricants and the operation of machinery.

An approved Best Management Practice is to keep "oil absorbent" materials onboard. However, Oil "absorbent" materials such as sheets, pads, bags and booms are a good, single use, start for the recovery of "spills"; however they DO NOT recover "visible sheen" and after use they need to be disposed of as "hazardous waste". C.I.Agent Solutions' Products work by "encapsulating" petroleum products. They DO recover "visible sheen" and can be reused multiple times. When disposal is needed, the solidified hydrocarbon may be disposed of as ordinary land fill (subject to local land fill regulations).

***Assumes C.I.Agent Solutions three (3) 6"x6" "bilge bags" are used to prevent "visible sheen" from being discharged overboard (price is before shipping and applicable sales taxes). If you should discharge a "visible sheen" a 12 foot Quick Deployment Boom is priced at \$140.**

J.N. Allinson Associates, Inc. is a distributor for C.I.Agent Solutions' products. Visit www.allinson.com for price list that describes available products ranging from single bilge bags to prepackaged 1st Response Oil Spill (Rapid Recovery) Kits.
